

LAND CATEGORIES

Taken from the left hand side of the matrix: the boxes can be rearranged so that size is proportional to actual land surface area.

Land use is here represented as a decision tree.

The ovals show utility functions that can be used to link and weight attributes in a decision model using DEXi software.

OTHER DIMENSIONS

1. Value and outputs of land

- Products from the land
- Economy and employment
- Losses and pollution
- Habitat, wildlife and shared space
- Human wellbeing and perception

2. Ownership and political will

3. External: human influences

- Import/export balance
- Blockade and war
- Nuclear fall-out / pollution

4. External: natural

- Solar radiation balance
- Precipitation
- Wind, dust and storm
- Temperature
